When, in October of 1917, the college moved to its present location, there were three new buildings and a powerhouse. "Old Main" now the Physics building, held all classes except chemistry, which was conducted in what is now the Geology building.

Burgess Hall, and a few years later Kelly Hall, were built as dormitories and later converted to class rooms.

Left of the power house the picture shows the old mill that was worked in conjunction with the practice mine up the hill. It was later torn down to make way for the southern addition of Seamon Hall.

The narrow dirt roads and the trails over which the students walked to school took care of student transportation.

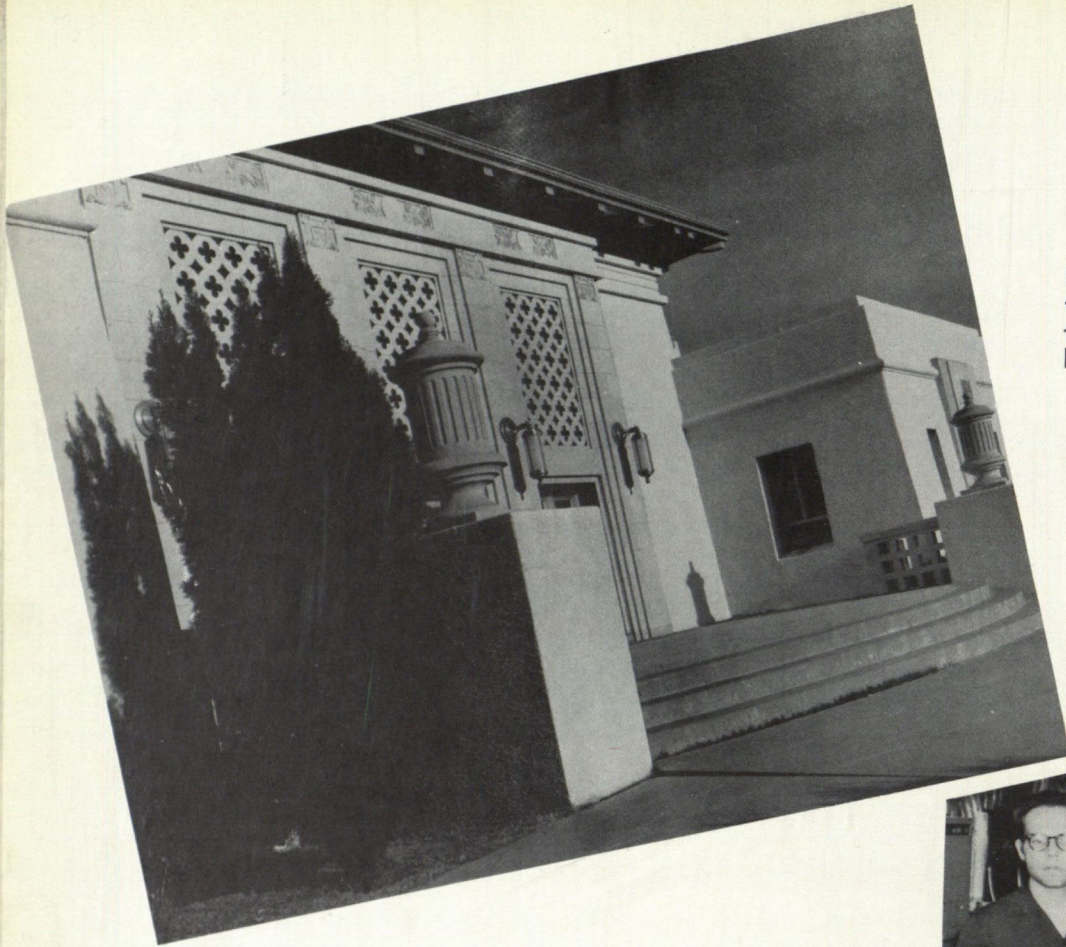

A view of the campus today shows broad paved streets, cars without number, and parking at a premium.

Where football games were once played in a flatland between two goal posts, there is now a stadium seating 14,000 with modern press and broadcasting facilities.

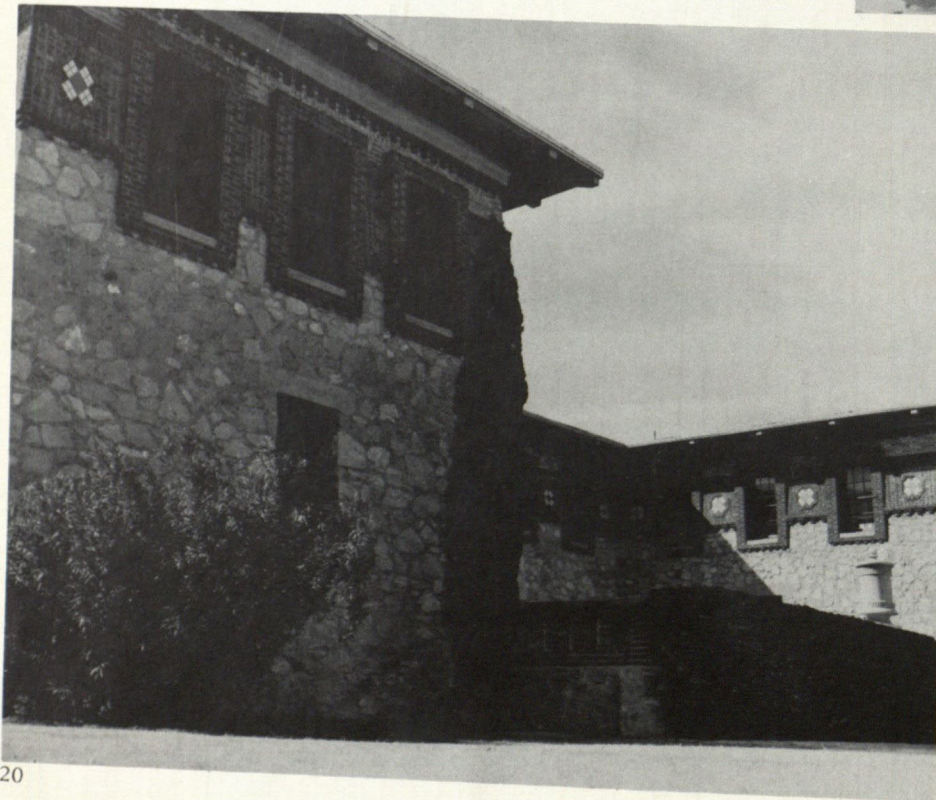

The Texas Western campus today invariably excites the interest of the visitor and has become known as the most picturesque college campus in America. Several major college buildings are now on the drawing boards, and changes in the future will be equally as important as those of the past. Texas Western College is assured of a great future.

STUDENT UNION BUILDING
Lounges, ballroom, Snack Bar, recreation room, Bookstore, student publications, and deans of women and student life.

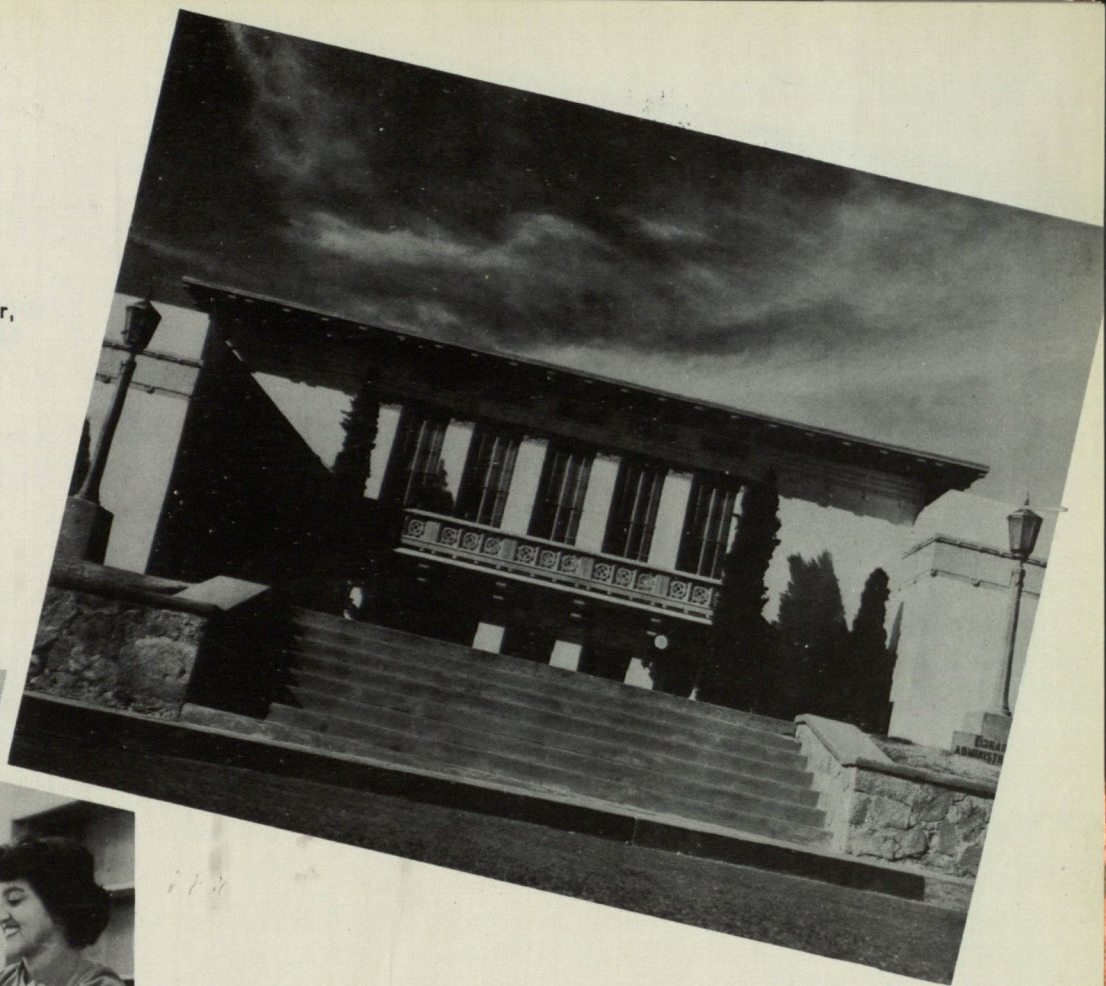

Indigestion, Dick?

MUSEUM
Collections of geology and archeology featuring the southwest and the Peak Animal Collection.

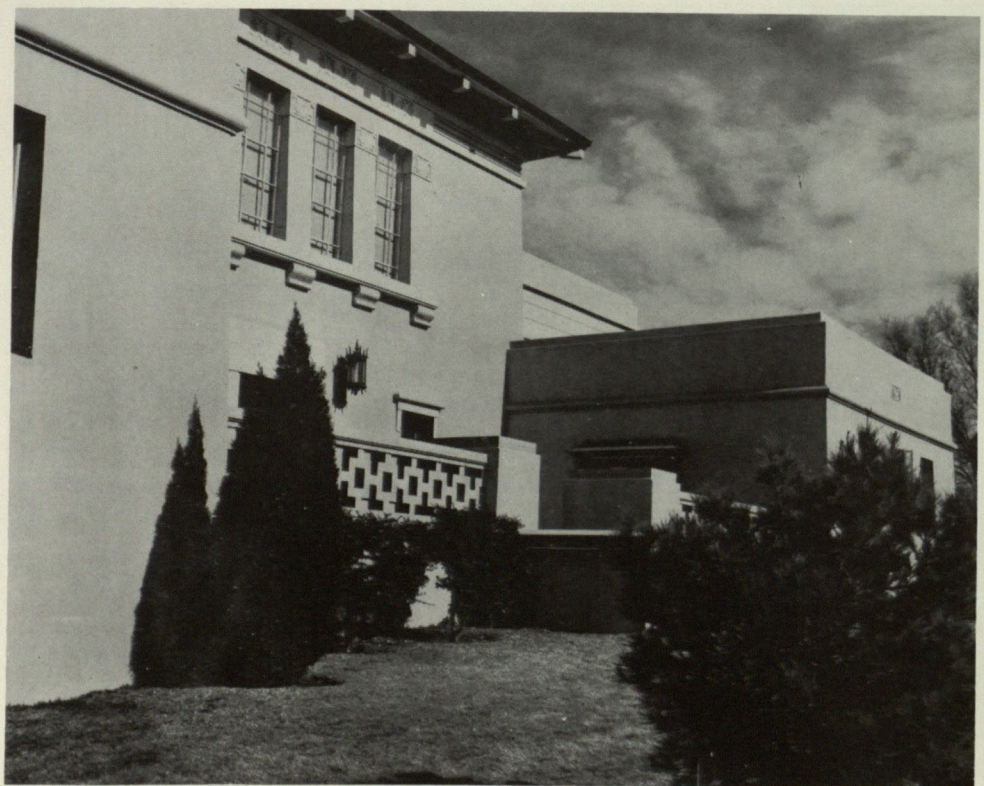

ADMINISTRATION
Dean of Arts and Sciences, registrar,
business manager, college library.

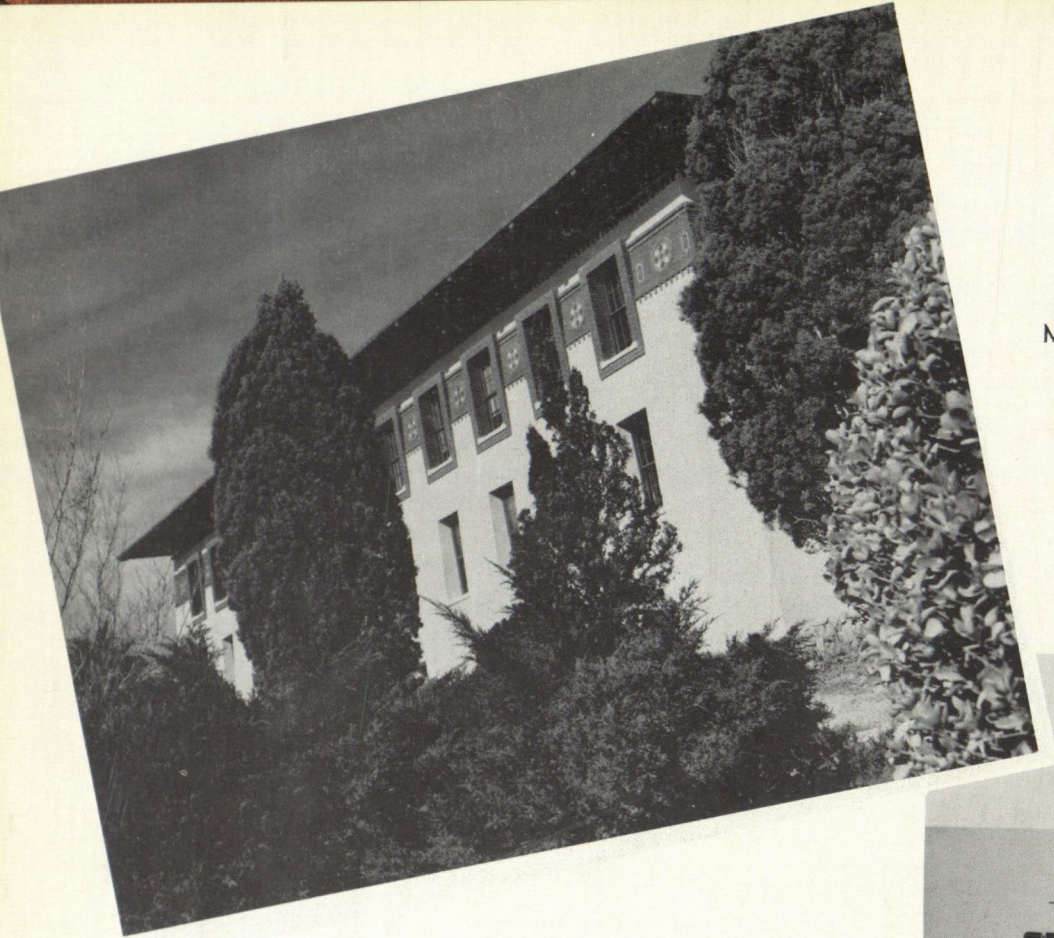

Bet You Don't Read Them.

COTTON MEMORIAL
Art exhibits . . . classes in design, paint-
ing, sculpture, jewelry, and ceramics.
